EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Lord, Registration Number: 46,479 on May 9, 2009.

The application has been amended as follows:

CLAIMS

In claim 21, line 1

replaced "storage medium" with -- shared memory storing--

In claim 31, inserted after line 6, --a processor;--

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 14, prior art of record does not teach operating on the shared data structure using insert-type and delete-type operations that are linearizable and lock-free for all concurrent executions thereof, wherein the insert-type operation performs a synchronized update of pointers beginning at the first level thereof and continuing upward, and wherein the delete-type operation performs a synchronized update of pointers beginning at a Kth level thereof and continuing downward to the first level.

Regarding independent claim 21, prior art of record does not teach a functional encoding of linearizable operations on the shared object, wherein the linearizable operations include both insert-type and remove-type operations and are lock-free for all concurrent executions thereof, wherein the insert-type operation performs a synchronized update of pointers beginning at the first level thereof and continuing upward, and wherein the delete-type operation performs a synchronized update of pointers beginning at a Kth level thereof and continuing downward to the first level.

Regarding independent claim 27, prior art of record does not teach deleting a node from the shared list-type data structure by excising the node from successive ones of the referencing chains, beginning with a highest-level one of the referencing chains that traverses the node and continuing through a lowest-level one of the referencing chains, wherein each such excision employs a linearizable synchronization operation to bridge the excised node and associate a dead pointer indication therewith and inserting a node into the shared list-type data structure by introducing the inserted node into one or more of the referencing chains, beginning with the lowest-level referencing chains and continuing through successive zero or more higher-level referencing chains.

Regarding independent claim 30, prior art of record does not teach inserting into, and deleting from, the shared list-type data structure, wherein all concurrent executions of the deleting and the inserting are linearizable and lock-free, wherein the inserting comprises performing a synchronized update of pointers beginning at a first level and continuing upward, and wherein the deleting comprises performing a synchronized update of pointers beginning at a K -level and continuing downward to the first level.

Regarding independent claim 31, prior art of record does not teach lock-free means for coordinating concurrent and linearizable executions of both insert-type and delete-type operations on the skip list, wherein the insert-type operation performs a synchronized update of pointers beginning at the first level thereof and continuing upward, and wherein the delete-type operation performs a synchronized update of pointers beginning at a Kth level thereof and continuing downward to the first level.

3. Claims 14, 16-33 are allowed.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
